West WRIA 15 to be included in the Hood Canal
Limiting Factors Analysis report.

Vashon/Maury Islands to be
included in the WRIA 9
Limiting Factors Analysis
Report.

This map represents composite known or presumed salmonid distribution for streams in East WRIA 15. Salmonid species considered and included in this composite are chinook, chum, coho, steelhead, and cutthroat. Identified salmonid presence in East WRIA 15 streams is the result of professional observations and experience of TAG participants, and other recorded observations. The represented distribution is an under-representation of actual distribution, as there are streams or reaches where no spawner surveys have been conducted. There are also a large number of streams where salmonid presence has been limited by fish passage barriers. Although many barriers have and are being corrected, recolonization upstream of the previous barriers will occur gradually over time.
